Stiles, A. C. Particle-Induced X-Ray Emission Spectrometry (PIXE) - Google Books Result Chemiluminescence (sometimes chemoluminescence) is the emission of light . The decay of this excited state[?] to a lower energy level causes light emission. In theory, one photon of light should be given off for each molecule of reactant. Another gas phase reaction is the basis of nitric oxide detection in commercial Handbook of Petroleum Product Analysis - Google Books Result 9, 1995 Molecular emission cavity analysis Flame Chemiluminescence Analysis by Molecular Cavity Detection, edited by D.A.
